Opportunity Card – Open to Relocate

Dear Hiring Manager,

I am writing to express my strong interest in joining your team. With more than six years of hands-on experience building production-grade systems — spanning full-stack development, DevOps automation, cloud infrastructure, and AI/ML — I bring a rare combination of breadth and depth that lets me contribute from day one, across the entire software lifecycle.

At AnnexTech Software, I led the development of a Flutter and Spring Boot platform that served 10,000+ active users at 99.9% uptime, processing over 50,000 API calls daily with zero P1 incidents across three years in production. I designed microservice architectures with REST and gRPC, implemented JWT/OAuth2 security layers, and built an observability pipeline from Crashlytics through Prometheus to Grafana — cutting mean time to recovery by 45%. I also engineered a multi-layer test suite that achieved over 85% code coverage and blocked 60% of regressions before they ever reached staging.

On the infrastructure side, I optimised GitHub Actions CI/CD pipelines with intelligent caching strategies, delivering 40% faster build cycles and enabling same-day production releases. I have deployed and managed containerised workloads across AWS, Azure, and GCP using Docker and Kubernetes, and hold the **Google Professional DevOps Engineer** certification, alongside a **Google Cloud Big Data & Machine Learning** certification, affirming my commitment to rigorous, cloud-native engineering.

My academic work at Technische Hochschule Ingolstadt — pursuing a Master of Engineering in Artificial Intelligence for Autonomous Systems — has deepened my expertise in reinforcement learning, computer vision (YOLO, CNNs, image segmentation), NLP, and embedded AI on platforms such as the NVIDIA Jetson Nano. I have authored peer-reviewed research on heterogeneous high-performance computing and have applied this knowledge directly in a production reinforcement learning navigation agent and a real-time multilingual video-collaboration platform.

Beyond technical delivery, I am a mentor and communicator. I coached three junior engineers through pair programming, lifting the team's PR first-pass approval rate to 98%. I am fluent in English (C1) and conversational in German (A2), and I hold an EU Opportunity Card that allows me to work across the EU/EEA without employer sponsorship burden.

I am energised by challenging technical problems and by teams that care about craftsmanship. I would be delighted to discuss how my background aligns with your goals — and to demonstrate, concretely, why I would be an asset to your organisation from the very first sprint.

Sincerely,

Vatsal Maisuria
